ABSTRACT

As part of the selection process of the 1966 National Achievement Scholarship Program, a program for able Negro high school students interested in attending college, 1,029 Finalists completed a 90-item questionnaire. The percentage of Finalists responding to each alternative of each item was obtained, and a matrix of intercorrelations of 50 selected items was calculated. In terms of their item responses, the Finalists appeared to be high aspiring, high grade achievers, academically oriented, professional occupation oriented, high extracurricular achievers, active, interesting, and talented young people. ## OPERATIONAL STATISTICS

This report is one of a series on operational statistics in which tables descriptive of NMSC's programs or of bodies of data collected for research are presented with little interpretation or discussion. Additional analyses of these data, designed to study their implications for substantive questions, is part of NMSC's continuing program of research.

## ABSTRACT

As a part of the Scholar selection process of the 1966 National Achievement Scholarship Program, 1,029 Finalists completed a 94-item research questionnaire. The percentage of Finalists responding to each alternative of each item was obtained; in addition, a matrix of intercorrelations of 50 selected items was calculated. Described in terms of their item responses, the Finalists appeared to be high aspiring, high grade achievers, academically oriented, professional occupation oriented, high extra curricular achievers, active, interesting, and talented young people. Follow-up of their progress and performance is planned for summer of 1967.

## Some Characteristics of Finalists in the 1966 National

### Achievement Scholarship Program

Warren S. Blumenfeld

The purpose of the National Achievement Scholarship Program (NASP), administered by the National Merit Scholarship Corporation, is to identify outstanding Negro high school students and give them financial aid based upon need to attend college. The program is designed to provide public recognition for intellectual achievement in an attempt to increase the attractiveness of academic success to Negro students (National Merit Scholarship Corporation, 1965). The participants in the first year's program, in which 224 Scholars were selected, have been described by Roberts and Nichols (1966).

The procedure for identifying and selecting students of academic promise in the 1966 NASP consisted of invited nominations from schools, committee screening, further assessment, and committee decision. In the spring of 1965, when the students were in their junior year of high school, all high schools in the United States were invited to nominate their most promising Negro students. This resulted in 5,600 nominations from 1,550 high schools. During the summer, a committee of high school guidance counselors and college admissions officers studied the nomination materials and identified a group of 1,029 nominees to become Finalists. The numbers of these Finalists were selected in numbers proportional to the Negro school populations in four geographic regions of the United States: 31% from the Northeast and Midwest, 31% from the Southeast, 29% from the Southwest, and 9% from the West (see Figure 1). This first committee also commended some 3,000 additional nominees for their record of achievements even though they were not named Finalists. In the fall of 1965, when the Finalists were in the

Fig. 1 Geographic areas from which Finalists and Scholars were selected in numbers proportional to the Negro population of the area. Alaska and Hawaii are included in area IV.

first semester of their senior year in high school, they were administered by their schools the verbal and mathematical subtests of the National Merit Scholarship Qualifying Test (NMQT) (Science Research Associates, 1964) and completed a research questionnaire. In the winter, with the test scores and nomination materials (but not the research questionnaire) available to them, a second committee, of similar composition to the first committee, selected 252 Scholars from among the 1,029 Finalists and named 58 Alternates.

The purpose of this report is to describe the 1,029 Finalists in the 1966 NASP in terms of their responses to the research questionnaire.

#### Procedure

For each of the 94 items in the research questionnaire, the percentage of Finalists responding to each alternative was obtained. These response

rates were further broken down by Scholars and non-Scholars (Alternates were considered non-Scholars) and by sex. These percentages are presented on pages 14 and 15 and pages 18 to 32. The number of cases upon which the percentages in each column is based are: male Scholars, 152; female Scholars, 100; male non-Scholars, 281; female non-Scholars, 496; total male Finalists, 433; total female Finalists, 596; and total Finalists, 1,029. Due to rounding error, column totals do not always total 100%.

Table 1, which appears on pages 16 and 17, presents intercorrelations among 50 selected items. The first 16 items (1 to 40) are primarily biographical, e.g., time spent reading books; the content of the next group of items (43 to 61) is occupational interest, e.g., degree of interest in becoming a research scientist; and the content of the last group of items (62-76) is reported achievement, e.g., having been staff member of school publication. The poles of two of the biographical items (2 and 40), the occupational interest items (43-61), and the reported achievement items (62-76) are inverted, i.e., the alternatives are in descending order of numbers, interest, and accomplishment. For this reason, a positive correlation with these items indicates less of, or lack of interest in, or the absence of, the item content. For example, the positive correlation, .16, between item 1, level of aspiration, and item 55, degree of interest in the occupation of bookkeeper, is an index of the lack of interest associated with high level of aspiration and the occupation of bookkeeper. Conversely, a negative correlation would indicate the presence of interest--or the presence of an achievement in the case of the achievement items. The item numbers are consistent with those in the presented questionnaire tabulations. Due to differential item non-response, the degree of which may be estimated from the questionnaire

tabulations, the N for Table 1 varies from one correlation to another. However, the typical N is greater than 1,000.

## Results

### Profile

The following profile describes the 1966 NASP Finalists in terms of their responses to the research questionnaire.

The Finalists were composed of 42% boys and 58% girls. Most Finalists (88%) came from public schools; a few (8%) came from parochial schools; and even fewer (4%) came from private schools. The academic level of aspiration of the Finalists was high: most (86%) aspire to graduate work, and 53% indicate interest in a professional or doctoral degree. Approximately 85% reported their high school grades to be B+ or better. The school subjects most frequently indicated as most interesting were Mathematics and Physical Science; the easiest subject was English; the most demanding subjects were Mathematics and Physical Science; and the subjects in which the Finalists reported their best performance were Mathematics and English.

The Finalists indicated the following order of preference (liking somewhat or liking very much) for occupations: research scientist (70%); social worker (65%); lawyer (64%); physician (62%); writer or journalist (57%); high school teacher (56%); engineer (48%); artist (41%); business manager (36%); accountant (34%); nurse or hospital attendant (34%); clergyman (23%); bookkeeper (22%); building contractor (17%); sales representative (14%); farmer (10%); electrician (7%); shop foreman (5%); and, life insurance salesman (5%).

They reported the following achievements and activities in high school: office in a school, church, or national organization (83%); student government or class officer (72%); service work (60%); essay or article published

(including school publication) (49%); staff member of school publication (44%); member of school musical organization (43%); prize or award for science project, or science publication (31%); poem or story published (including school publication) (30%); rating of good or higher in a music competition (27%); role other than major in a play (for which admission was charged) (27%); varsity athletic letter (22%); debating team, or debating society (19%); major role in a play (for which admission was charged) (18%); exhibited art work (16%); and, prize or award for art work, or art work published (8%).

The Finalists reported participating in the following activities (often or occasionally) during the two previous years: taking part in church or Sunday School activities (86%); playing sports not connected with school (69%); swimming, boating, hunting, fishing, or camping (66%); attending concerts, plays (not motion pictures) or ballet (62%); visiting museums or art shows (58%); playing a musical instrument (48%); sewing, knitting, crocheting, or embroidering (47%); acting, singing, or dancing for a public performance (47%); drawing, painting, or sculpting (47%); writing poems, stories, or novels (not for school courses) (46%); working on science projects or activities (not for school courses) (31%); collecting stamps, coins, rocks, insects, etc. (26%); making or repairing electrical or electronic equipment (18%); building model airplanes, ships, trains, cars, etc. (14%); working with photographic equipment (11%); and, making mechanical or automobile repairs (10%).

For all but a few Finalists, college attendance has been a long-standing probability. Parents were cited to have been the most active encouragement source for college attendance (62%); teachers and school officials were also cited (25%). About half (49%) said their primary reason for attending college

was the preparation for a good occupational future, career training, and specific knowledge to use on a job or career; about a third (31%) reported their primary reason to be the cultivation of the intellect, an appreciation of ideas, and the development of the ability to pursue knowledge. About half (49%) said the least important reason for attending college was development as a well-rounded person, through extra curricular activities, rewarding and lasting friendships, and social life; and about a quarter (26%) said the least important reason was the development of a personal philosophy of life, an individual set of values, and the ability to maintain independence of judgment and opinion.

There was considerable variability in the length of time in which the Finalists were interested in their career choice; the typical length of time given was between 2 and 3 years. About two thirds of the group indicated that the nature of the work was more important than the rewards of the work. Work interest took precedence over work importance, which took precedence over freedom of planning work. Material rewards of work were considered more important than social rewards. Three quarters of the Finalists cited good security a more important consideration than high pay or income or high status. Friendly relations on the job was much more important than leadership or authority over people. Three quarters of the girls (78%) hoped to be a married career woman with children in 15 years.

Approximately two thirds (68%) of the Finalists came from homes in which both parents were present. The next largest subgroup (23%) came from homes in which the mother was present, but the father was not. The median father's education was about 4 years of high school, and the median mother's education was about the same. Almost half of the reported father's occupations were of the non-skilled blue collar type requiring short on-the-job

training; e.g., factory worker, truck driver, milkman, mechanic, etc. Professional occupations, e.g., those requiring some specific college or graduate training such as physician, lawyer, college professor, engineer, clergyman, etc., were reported by 18% of the Finalists. Skilled occupations of fathers, which often require some specific off the job training or apprenticeship, such as carpenter, machinist, printer, policeman, etc., were reported by 11%. Almost half (42%) of the Finalists reported that the mother did not usually work outside the home. Professional occupations of mothers, e.g., physician, scientist, accountant, etc., were reported by 18% of the Finalists; the next most frequently reported occupational category for mothers was that of non-skilled. Approximately 10% of the Finalists did not report their family income; but 44% reported the figure to be less than \$6,000, and 15% reported the figure to be \$10,000 or more. A quarter of the Finalists reported a family income below \$4,000. The median family income reported was estimated to be slightly in excess of \$6,000. The typical family size was about 3 children; and the Finalist was most frequently the oldest, or an only child. More than half (61%) of the Finalists reported the number of books in their home to be in excess of 100.

Most Finalists reported that they did not belong to a close group of friends which did most things together. More than 80% reported 4 or 5 of their 5 closest friends planned to attend college. About half of the same peer group was reported to have more than average influence in the high school. About half (49%) reported no one they considered their friend to have dropped out of high school.

Most Finalists have lived in their present communities during the span of their high school preparation. Almost half (48%) came from cities with populations greater than 100,000.

The typical number of hours devoted to study each week was in the interval 15 to 19; the number of hours spent reading for other than school assignments was slightly greater than 3. The median number of non-school required books read during the past year was reported to be between 11 and 15. The typical frequency of dates was about one a month. During the school year, TV watching was typically 5 to 10 hours per week. Evenings out for fun and recreation were typically reported to be one per week. Slightly more than half (56%) of the Finalists reported that during the school year they did not work for pay.

#### Item Relationships

Table 1 presents the concurrent relationships of the 50 selected items. For purposes of illustration, the characteristics (correlates) associated with item 1, level of academic aspiration, and item 29, sex, are indicated below.

Inspection of column 1 of Table 1 suggests that those Finalists reporting a higher level of academic aspiration tended to report obtaining higher grades (-.08). Reports of higher father's education and mother's education were more characteristic of this group (.16 and .19, respectively). Those with high aspirations also reported higher family income (.10). They tended to be male (-.15); their homes had a larger number of books (.21); and more of their friends were planning to attend college (-.13). They tended to report a higher number of hours spent studying (.09) and spent reading for other than school assignments (.11), and they reported a higher number of non school-required books read (.14).

Those who reported a higher level of academic aspiration tended to report interest in the occupations of research scientist (-.24), physician (-.20), lawyer (-.16), writer or journalist (-.08), engineer (-.07), and

electrician (-.07). They tended not to be interested in the occupations of bookkeeper (.16), accountant (.10), and nurse or hospital attendant (.07).

A higher level of academic aspiration tended to be associated with reports of the following achievements: prize or award for science project, or science publication (-.14); major role in a play for which admission was charged (-.11); student government or class officer (-.10); office in school, church, or national organization (-.10); debating team, or debating society (-.10); member of school musical organization (-.09); varsity athletic letter (-.08); and essay or article published, including school publication (-.07).

It should be noted that although the correlations upon which the preceding paragraphs are based are statistically significant beyond the .05 level, most are quite low in the absolute sense, indicating that the degree of relationship is not great.

Regarding sex differences in these data, boys, as reported above, tended to have a higher level of academic aspiration than did girls (-.15); they reported working more hours per week for pay (-.25); they reported a higher dating frequency (-.10); the boys tended to watch more television during the school year (-.07); and they reported going out more evenings for fun and recreation (-.16). Girls tended to report higher grades (-.12); and they reported more non school-required books read in the past year (.07).

The occupations in which boys reported more interest than girls were engineer (.41), electrician (.35), building contractor (.32), shop foreman (.26), research scientist (.13), life insurance salesman (.09), clergyman (.09), business manager (.08), and farmer (.07). The occupations in which girls reported more interest than boys were nurse or hospital attendant

(-.38), social worker (-.37), writer or journalist (-.14), high school teacher (-.13), and bookkeeper (-.12).

The single achievement which boys tended to report more often than girls was varsity athletic letter (.33). Achievements reported more frequently by girls were staff member of school publication (-.11), poem or story published, including school publication (-.08), and service work (-.08).

#### Prospectus

These data indicate the general high caliber and some of the characteristics of the 1966 NASP Finalists. As with the initial year of the program, these students appear to be high aspiring, high grade achievers, academically oriented, professional occupation oriented, high extra curricular achievers, active, interesting, and talented young people. Most will probably enroll in college in the fall of 1966. These Finalists will be followed up in the summer of 1967, when they should have completed their freshman year of college, to assess their performance and progress. The data presented in this report may then be studied with respect to these latter evidences of performance.

1. What is the highest level of education you expect to complete?

Less than four years of high school  
Graduate from high school  
Junior college, or vocational or business school after high school  
Some college, but not graduate  
Four years of college (bachelor's degree)  
One or two years of graduate school (master's degree)  
Three or more years of graduate school (professional or doctoral degree)  
No response

2. What is your grade average for your high school course work so far?

A (95-100)  
A- or B+ (89-94)  
B (84-88)  
B- or C+ (78-83)  
C (73-77)  
C- or D+ (68-72)  
D or lower (67 or below)  
No response

3. How long has it been understood by you and your parents that you would probably go to college?

It has always been understood or accepted  
Since elementary school  
Since junior high school  
Since entering high school  
Since about a year ago, or less  
I am probably not going to college  
No response

4. How long have you lived in your present community?

Less than one year  
One but less than three years  
Three but less than five years  
Five but less than ten years  
Ten years; but less than all my life  
All my life  
No response

## 5. Which of the following best describes your parents or the family you live with?

71.1	72.0	62.6	69.8	65.6	70.1	68.2

\* The order of the alternatives in these asterisked items is ascending, whereas the order of the alternatives of the non-asterisked items is descending. For this reason, a positive correlation between these asterisked items and a non-asterisked item indicates less of, or lack of interest in, or absence of, the non-asterisked item content. Conversely, a negative correlation between these asterisked items and a non-asterisked item indicates more of, or the presence of interest in, or the presence of, the non-asterisked item content. The signs of correlations between non-asterisked items and the signs of correlations between asterisked items may be interpreted in the standard manner.

## SCHOLARS      NON-SCHOLARS      ALL FINALISTS

11. What is the occupation of your father (or the male head of your household)? If he is retired, deceased, or unemployed, indicate his former or customary occupation. Write the specific occupation in the space provided, and then use the categories given to answer on the answer sheet. Read all the categories carefully. If there is no male head of household, leave the item blank.

Father's occupation: \_\_\_\_\_

23.7	20.0	14.9	17.3	18.0	17.8	17.9	Profession which generally requires some specific college or graduate education--physician, lawyer, college professor, architect, teacher, psychologist, scientist, accountant, engineer, clergyman, etc.
3.3	1.0	1.4	2.2	2.1	2.0	2.0	Profession which does not generally require specific higher education--actor, artist, entertainer, journalist, musician, author, athlete, etc.
2.0	5.0	2.8	5.4	2.5	5.4	4.2	Business--business executives, bankers, financial officers, training or personnel officers, managers and assistant managers of stores, offices, and departments, insurance adjusters, contractors, stockbrokers, all owners of businesses (except those who are Professional), etc. Those who have a fairly high level of authority and responsibility for a business should be classified here.
2.6	1.0	2.8	1.6	2.8	1.5	2.0	Clerical--office clerks, bookkeepers, bank tellers, etc. Those who do primarily paper work but are not better classified under A, C, F, or H should be classified here.
0.7	1.0	1.1	1.2	0.9	1.2	1.1	Sales--all those whose job is primarily selling. Sales managers, store owners, stockbrokers, etc., are classified under C.
6.6	4.0	4.3	2.6	5.1	2.9	3.8	Government official--mayor, Director of Internal Revenue, politician, postmaster, Superintendent of Schools, police official, military officer, diplomat, etc. This category includes those employed by any government who have a fairly high level of responsibility, but are not better classified under B. Examples of occupations which should not be included here are: mail carrier, policeman, clerk in a tax office, scientist, etc.
2.6	2.0	0.7	2.6	1.4	2.5	2.0	Farmers and ranchers--farm or ranch owners, farm or ranch workers, etc.
1.3	4.0	0.7	1.2	0.9	1.7	1.4	Technical work which generally requires some specific off-the-job training--laboratory or medical technician, draftsman, computer programmer, etc.
9.9	12.0	10.7	11.7	10.4	11.7	11.2	Skilled work which often requires some specific off-the-job training or an apprenticeship--carpenter, barber, machinist, printer, railroad engineer, airlines pilot, TV repairman, plumber, policeman, etc.
36.8	38.0	47.3	42.7	43.6	41.9	42.7	All others--many people are included: Factory worker, truck driver, military enlisted man, seaman, laborer, filling station attendant, milkman, postman, mechanic, etc. Generally training for these jobs is short and conducted on the job.
10.5	12.0	13.2	11.3	12.2	11.4	11.8	No response

12.	M	F	M	F	M	F	M	F	TOTAL	
										Mother's occupation:
	40.8	39.0	42.7	42.7	42.0	42.1	42.1	42.1	42.1	My mother does not usually work outside the home.

## Previous NMSC Research Reports

### Volume 1, 1965

#### Number

1. The Inheritance of General and Specific Ability, by R. C. Nichols.
2. Personality Change and the College, by R. C. Nichols.
3. The Financial Status of Able Students, by R. C. Nichols (also in Science, 1965, 149, 1071-1074).
4. Progress of the Merit Scholars: an Eight-Year Follow-up, by R. C. Nichols and A. W. Astin (also Personnel and Guidance Journal, 1966, 44, 673-681).
5. Prediction of College Performance of Superior Students, by R. J. Roberts.
6. Non-intellective Predictors of Achievement in College, by R. C. Nichols.
7. Ninth Annual Review of Research, by the NMSC Research Staff (includes abstracts of all previous NMSC studies).
8. Social Class and Career Choice of College Freshmen, by C. E. Werts (also in Sociology of Education, 1966, 39, No. 1, 74-85).

### Volume 2, 1966

1. Participants in the 1965 NMSQT, by R. C. Nichols.
2. Participants in the First National Achievement Scholarship Program for Negroes, by R. J. Roberts and R. C. Nichols.
3. Career Choice Patterns: Ability and Social Class, by C. E. Werts.

---

NMSC research is supported by grants from the National Science Foundation, the Carnegie Corporation of New York, and the Ford Foundation.
